I listen to XM all the time. It provides a welcome change of programs on top of the mindless music that FM plays on every channel. There is no diversity. They just play the same songs on every station. From R&B to Rap to Hard Rock to Top 20, you just hear the same music. On top of the diversity I can hear, the traffic and weather is extremely helpful in distributing weather and traffic conditions of other cities. I travel a lot, and being able to hear weather conditions can help me decide if I should stop before the city for the night or continue on and through the city I am getting ready to drive through. I plead with you, please, keep satellite radio just the way it is as it is extremely useful and a welcome change to the radio of old. I for one will never go back to FM again. I will just listen to CD's instead of radio altogether if satellite is destroyed.
